

Iryna Yung

UX/UI Designer- 10 years of experience

Odesa, Ukraine (Remote)

ireneyung.de.sign@gmail.com

Upper-Intermediate

link to my PORTFOLIO

Expertise Highlights

- AI Tools in UX/UI Design;
- Responsive web and mobile applications design;
- User Story writing;
- Creating mockups, rapid and high-fidelity prototyping;
- Graphic design;
- Print design and preparing materials for printing;
- Icons design;
- Illustrations and infographic design.

Main skills

- Wireframes / Prototypes
- User flows / User journey maps
- Storyboards
- Interfaces matrix
- Moodboards / References
- Product design
- Research / Best practices
- Design system / Atomic design
- Pixel perfect

Tools

- Figma / FigJam
- ChatGPT / FigMake / Lovable / Claude
- HotJar
- Photoshop / Illustrator
- Balsamiq mockups
- Lucidchart / Miro
- Jira / Teams / Slack / Trello / Asana

Additional skills

- Hand drawing
- Illustrations
- Graphic design
- Print design
- Article writing

Summary

- **10+ years of experience** in the Information Technology industry, 50+ designed products and projects;
- **Using AI tools** to support the design process, including content generation, visual exploration, ideation, and rapid validation of UX/UI concepts. Simple deployment via GitHub & Claude. Delivering Claude Code results to developers.
- **Turn ambiguity into clarity** — transform vague or complex requirements into structured, intuitive user flows.
- **Improve UX at scale** — optimise existing products used by large user bases through continuous, data-informed improvements.
- **Redesign complex legacy products** — deliver iterative redesigns while navigating technical constraints and preserving established workflows.
- **Build products from the ground up** — develop concepts, formulate and validate hypotheses, and support startups from early discovery through launch and ongoing iteration.
- **Build and scale design systems** — create design systems from scratch and evolve existing ones, working with extensive component libraries, design tokens, and complex design infrastructure.
- **Bridge design and development** — maintain close collaboration with engineers, QA teams, marketers, and research participants to ensure design quality and successful implementation.
- **Align business goals with user value** — strive to find the best balance between business needs and user benefits.
- **Create smooth design workflows** — build efficient, intuitive design processes and foster seamless collaboration across the team.
- **Bring good vibes (and bad jokes)** — help create a positive, friendly team atmosphere.

Education

- **Odessa State Academy of Building and Architecture, Ukraine**
  Designer-Architect Master's Degree

Main Work Experience & Projects

- **DataArt** - UX/UI Designer - Last 5 years

Began incorporating AI tools into my design workflow, using them for ideation, UX exploration, and rapid validation. Exploring nocode possibilities of Claude, simple deployment via GitHub & Claude, delivering code to developers. Worked on both large and small B2B and B2C projects, as part of both large and small teams. Extensive experience working with large design systems and component libraries, as well as within large design teams. Experienced in both legacy product redesigns and designing products from scratch. End-to-end experience across the entire design process — from initial requirements gathering and ideation to design, testing, iteration, and ongoing support. Experience designing responsive web services and native mobile applications for iOS and Android.

- **Wildix** - Product Designer - 1 year

Worked on communication B2B web services. Redesigned products: mobile and web apps. Design of apps based on React Native (web and mobile). Design system from the scratch. Design of very specific interfaces.

- **Magic Powered** - Product Designer - 1 year

Worked on social network startup. Designed web pages and mobile apps for iOS and Android.

- **Instasport** - Product Designer - 1 year

Design from the very start of the CRM system for sports club management.

- **Halo Lab** - UX/UI Designer - 2 years

Worked on different startups and redesign legacy products: management tools, chats, landing pages, constructors, logos, branding, illustrations.

Different Experience

- **Hillel IT School** UX/UI mentor in EVO project
  Managing a design team. Training and mentoring for junior designers who graduated from Hillel IT School.
- **Odyssey Hackathon 2.0 Nature, Netherlands** UX/UI designer
  Worldwide extreme competitive workshop in Groningen in collaboration with the amazing team from the USA and Ukraine.
- **Odessa State Academy of Building and Architecture**
  University lecturer and scientist
  Scientific articles, science work, and lectures gave me an exclusive experience of stress resistance, critical thinking, structural writing, and emotionally speaking. I have 7 science articles, got a few Ukrainian awards, and a lot of students I love and proud of.

Recently Completed Projects

B2B Booking Platform

Client: EU-based International Platform Platform: Web (responsive)

Description: B2B travel integration platform for agencies and full-cycle booking providers (hotels, transfers, visas, payment, etc.). One of the core designers in a team of six, working on the redesign of a large legacy product with an established user base (100000+ users).

Activities: Requirements gathering and clarification; Wireframes and mockups creation; Storyboards and user scenarios creation; UI kit creation, Design systems, and component libraries; Clickable prototypes; User Story development; Competitor analysis/Best practices; Solution ideation and validation; High-fidelity design with user flows and use cases; Responsive design; Rapid prototyping (Figma Make); Iterative design; Close collaboration with developers and stakeholders; UX improvements and feature enhancements; UX audit; Design review; Ensuring consistency across multiple company products.

Network Monitoring System

Client: USA-based internet provider Platform: Web

Description: A web-based platform for monitoring network and internet performance metrics across the United States, handling large volumes of complex data and presenting it in a clear, user-friendly way. Designed interactive dashboards with charts, statistics, and interactive maps to provide full visibility into network status, based on different access levels.

Activities: Requirements gathering and clarification; Wireframes and mockups creation; UI kit creation, Design systems, and component libraries; Clickable prototypes; Solution ideation and validation; High-fidelity design with user flows and use cases; Responsive design;

Logistics iOS Application

Client: USA-based Logistics Company Platform: iOS

Description: Designed an iOS-based app for managers and warehouse staff to streamline route tracking, check-ins, and status updates, all integrated with an existing legacy system. The app provides a fast and intuitive way to monitor routes and statuses, replacing previously manual processes for status changes and check-ins.

Activities: Requirements gathering and clarification; Wireframes and mockups creation; Competitors review / Best practices; UI kit creation, Design systems / Component libraries; Clickable prototypes; Solution ideation and validation; High-fidelity design with user flows and use cases;
